

Chris Barwicki

Aspiring Software Engineer

Detail-oriented, organized and meticulous employee. Enthusiastic team player ready to contribute to company success. Complex problem-solver with analytical and driven mindset. Dedicated to achieving demanding development objectives according to tight schedules while producing impeccable code.

Projects

- Created the front-end and worked with the back-end for an application, called "Web Reads" mostly using the JavaScript frameworks React and Express, and a MongoDB database. This application uses machine learning to recommend books for the user based on their previous reading history. Components of this application include a Sign In and Sign Up page which saves user information in a database, a user page, a list of books in the database, and an aesthetically pleasing home page.
- Created a CRUD application using React and Express that allows users to add campuses to a Postgres database, as well as students belonging to these campuses. Users were then able to update any information in the database as well as delete it.
