Education

Hunter College — New York, NY
Master of Arts in Computer Science — *Expected Graduation 6/28*

Hunter College — New York, NY
Bachelor of Arts in Computer Science

Brooklyn Technical High School — Brooklyn, NY
High School Diploma

Projects

Yugioh Deck Editor | *React.js, Django*

- Developed a full-stack application in React.js and Django which allows the user to build their own deck for the Yugioh Trading Card Game.
- Implemented integration with a public API which has information on over 13,000 Yugioh cards.
- Hosted over 26,000 images of cards using AWS S3 cloud storage.
- Features an extensive search filter with multiple options for filtering cards based on various criteria.

Music Controller | *Python, Django, React.js*

- Developed a full-stack application which uses a RESTful API to act as a collaborative music playing system.
- Implemented Spotify API integration to enable application-based music playback control.
- The host user can create a room, which others using the application can join by entering the room code.
- Features include pausing or unpausing the music currently being played, as well as voting to skip the current song being played.

Web Reads | *React.js, Express.js, MongoDB*

- Integrated machine learning models into back-end systems with Express.js to analyze reading patterns and suggest relevant books, optimizing recommendation quality.
- Uses K-means clustering to determine which books a user would be most likely to want to read next.
- Developed user profile creation functionality allowing customizable background colors and icon selections.
- User's login information and well as their list of liked books is stored in a MongoDB database.

Campus Management System | *React.js, Express.js, Postgres*

- Built a full-stack campus management system that supports CRUD operations for student, faculty, and course records.
- Users can add colleges as well as students, which are all stored in a Postgres database.
- Users can edit any information about the students or colleges, such as their profile picture, the school's address, or the student's GPA and email address.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C/C++, SQL, HTML/CSS
Frameworks: React, Node.js, Next.js, Django, Express.js, Tailwindcss, Material-UI
Developer Tools: Git, GitHub, MongoDB, Postgres, AWS, Vercel, Google Kubernetes Engine, VS Code, Visual Studio
